

Sahil feat. ChatGPT — Field Guide

A short field guide to human-led, AI-assisted creative production.

1. Name the intention

Before prompting, state what you want to communicate, who it serves, and what you will not claim.

2. Separate roles

The human owns judgment, editorial decisions, verification, publication and accountability. AI can assist with ideation, synthesis, code and drafts.

3. Prototype, then verify

Test every interaction, link, responsive breakpoint, keyboard path and downloadable resource. A deployed site is not necessarily a finished site.

4. Keep an evidence ledger

Mark what is fact, interpretation, hypothesis or fiction. Verify external references before publishing.

5. Make accessibility part of the art

Support keyboard focus, readable contrast, responsive layouts and reduced motion.

6. Reflect on the collaboration

Which decisions did the human make? Which outputs came from the model? What changed after testing?

A five-minute workshop

Choose one question. Write a one-sentence intention. Ask AI for three different structures. Reject two. Prototype one. Test with a real person. Revise.
